

# TEEN TECHNOLOGY

GROUP: NOAH TY BARRON, NOAH GRAHAM, BRAIN WICKHAM

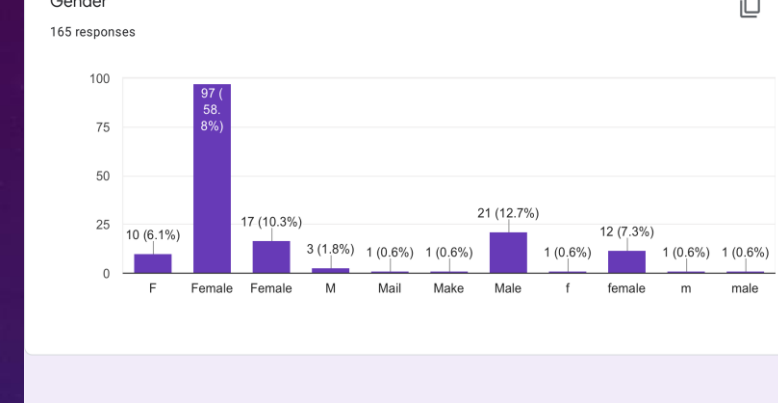

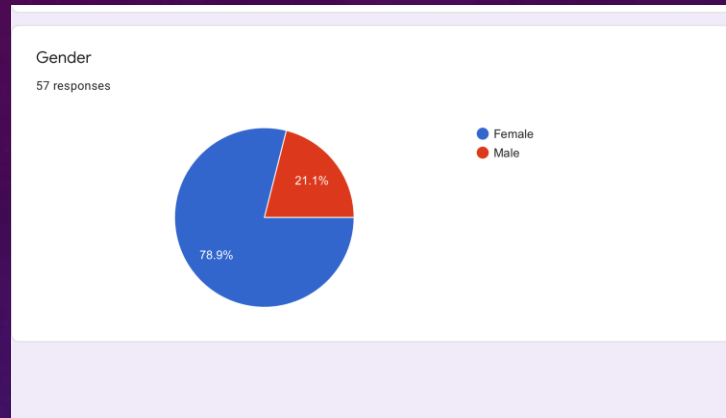

# WHAT DO ADULTS THINK THAT TEENS ARE DOING ON THEIR SMARTPHONES VS. WHAT KIDS ARE ACTUALLY DOING.

- In our group we know that teens are often misjudged by society on which apps they are using on their smartphones. So, we set out to correct that.

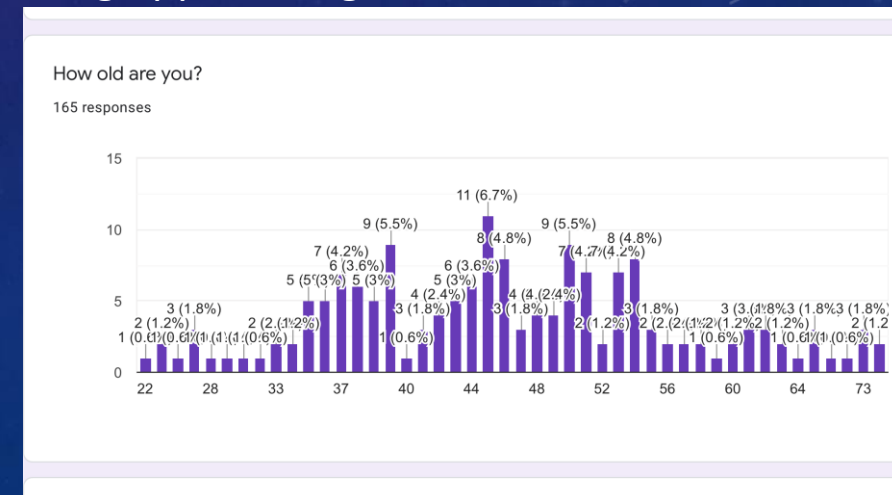

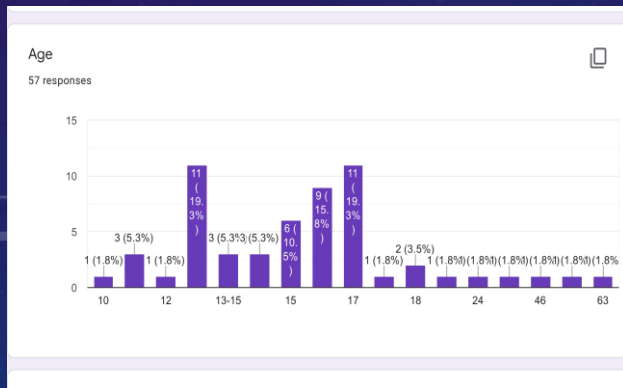

# OUR METHODS

- The method that we used in our research project was a survey in which we got overwhelming responses. On a side note thanks to all who participated. We posted this survey on the website for kids and adults.
- The range of responses for kids were ages 10 to 18 however the most responses they were given were the age of 17.
- The range of responses for adults were ages 22 to 73 years old however the most responses that were given were in the 40's.
- It also should be noted that on the kids survey 79 percent was female.
- On the adult survey 72 percent were female.

# OUR RESULTS

- In our over 160 adult responses we found that adults mostly think that kids are using the following apps: Instagram, Tik Tok, SnapChat, and YouTube.
- In our over 55 kid responses we found that kids are mostly using the following apps: Instagram, Tik Tok, SnapChat, and Music.

# OUR CONCLUSIONS

- In conclusion, adults are pretty spot on in guessing what kids use. However, there were some surprising apps that many kids said they used that very few adults said. These apps were: Music, Camera, Messages, and Netflix.

# REFERENCES

- Our group would like thank anyone who participated in taking the survey and a special thanks to Dr. Cockerham.
